# SPOT THE ENERGY WASTE

- 1. Circle those energy that is being wasted in this picture.**
- 2. What would you do in this situation?**

I will turn off the water tap to avoid water wastage. Then, I will close the door of the fridge as the energy will be wasted if the door of the fridge stays open. Also, I will turn the kettle off because extra energy are being used to heat the water. I will switch off the lights in the kitchen because it is still day time and the natural light are sufficient enough for me to see my surrounding.
